Introduction and document purpose

Pagero provides a Smart Business Network that connects buyers and sellers for automated, compliant, and secure exchange of orders, invoices, payment instructions and other business documents. With an open network and a wide range of value-added apps, Pagero helps businesses streamline their order-to-cash and purchase-to-pay processes while unlocking the full potential of accurate and reliable business data. All of this, regardless of location, industry, size or systems.

At Pagero, we believe that technology supports sustainability. That's why we are committed to helping businesses become 100% paperless, supporting resource efficiency, transparency and business continuity.

The main purpose of this country compliance report is to provide the reader with an in-depth analysis of the focus country's laws, regulations, and process with regards to e-invoicing and other trade documents. The analysis considers topics such as business requirements before switching to electronic invoices, e-document creation, e-document distribution, integrity and authenticity, and, finally, e-archiving.

This document guides how Pagero solutions support customers in the focus country to meet local regulations and serves as a supplement to Pagero General E-invoicing Process Description.

The information provided by Deloitte which is part of this material was solely prepared as general information. It was prepared to meet with specific requirements and was not prepared for any other purposes or objectives. Changes in conditions over time may affect the contents of the material and its content. We do not express any opinion or conclusion in this material.

1. Terminology

This section outlines general and country-specific terminology for Egypt which will be used throughout the whole document.

Term	Explanation
Advance electronic seal	According to the EIDAS regulations, an advanced electronic seal shall meet the following requirements as per the EIDAS regulations: (a) it is uniquely linked to the creator of the seal; (b) it is capable of identifying the creator of the seal; (c) it is created using electronic seal creation data that the creator of the seal can, with a high level of confidence under its control, use for electronic seal creation; and (d) it is linked to the data to which it relates in such a way that any subsequent change in the data is detectable. The difference between e-seal and e-signature is that an e-seal certificate is issued for a legal person.
Clearance	Where traders are required to send their tax documents, such as invoices, to a predetermined, often, state-owned infrastructure. The infrastructure conducts mandatory checks before the documents are to be considered issued, however, the infrastructure generally offers no exchange to the receiving party
Clearance Response	Is the name of the application response from the clearing infrastructure notifying the issuer whether the e-document has been approved, or rejected. The term is used by Pagero unless there is any country-specific term for this type of responses
CSP	Certificate Service Provider.
ETA	Egyptian Tax Authority
HSM	Hardware security module is a physical computing device that safeguards and manages digital keys, performs encryption and decryption functions for digital signatures, strong authentication and other cryptographic functions. Egypt e-Signature has to be performed via HSM device or USB token.

USB token	A USB token for Digital signature Certificate (DSC) is defined as a password-protected device in its physical form wherein a personal identity is established.
CAAdES	- An electronic signature technically implemented based on CAAdES has the status of an advanced electronic signature. This means that - it is uniquely linked to the signatory. - it is capable of identifying the signatory. - only the signatory has control of the data used for the signature creation. it can be identified if data attached to the signature has been changed after signing.
ITIDA	The IT Industry Development Agency fosters the local IT industry with a key part in forming a more secure e-commerce ecosystem and sourcing/offshoring services.
SDK	“Software development Kit” is the website created for end users to understand how to integrate their systems to the EG E-invoicing platform
Legal outsourcing	Third parties such as Pagero, may sign e-invoices on behalf of the issuer using a third-party certificate or token.
Technical outsourcing	Third party, such as Pagero, may sign e-invoices using exclusively the supplier certificate or token.
UUID	Unique document ID assigned by e-Invoicing system. It is made up of 26 Latin alphanumeric numbers and letters.

2. General overview

This section provides an initial introduction into the local e-invoicing environment within Egypt including the types of local e-invoice regulations, go-to governmental and industry bodies, and whether multiple invoicing regimes, that is, varying regulatory requirements, exist for example by industry, business size, or other defining factors.

Item	Commentary
Authorities and other agencies relevant for e-invoicing	• Egyptian Tax Authority (ETA) • Minister of Finance (MOF) • Information Technology Industry Development Authority (ITIDA)
Main applicable legislation in respect of e-invoice issuance, exchange, reception and retention	• Value Added Tax law No.67 of 2016 • Executive Regulations for the Value Added Tax Law No.66 of 2016 • Law No. 15 of 2004 (eSignature Organisation) • Decree No. 109/2005 (eSignature Law) • Decrees obligating taxpayers to follow phased roll-out of the e-invoicing mandate. See section 10.3

3. E-Invoice status

When considering sending or receiving e-invoices two basic questions should be considered: is invoice equal to paper invoice from the legal perspective; and if there are any situations where e-Invoicing is mandatory for reception or transmission.

Item	Commentary
E-invoice status	• Mandatory for all taxpayers
Varying invoicing regimes¹	• Yes
e-Invoicing model	• B2B and B2G: Clearance • B2C: E-receipt system
e-Invoice definition²	• An Electronic Tax Invoice is electronically prepared and signed by the taxpayer and cleared by ETA platform
Scope of taxpayers the e-document mandate applies to	• All Egyptian VAT-registered taxpayers
Mandatory AoR (document response) process	• No requirement for buyers to be able to send electronic AoR messages to the supplier, but there are several actions and responses available for the buyer in the ETA system. See further in section 5.6
Implementation / roll-out plan	• The roll-out plan is in progress, the expectation from the ministry of finance is that the full implementation of country-wide e-invoicing should be done by 2023. See the latest timelines in section 10.3

¹ It is possible that a business is required to send e-invoice in some scenarios, and send voluntarily in others

² Differing definitions may exist between different levels of government, or differing legislation, i.e. accounting law and IT law

4. Before switching to e-invoices

4.1. IT³ registration

Any natural person or legal entity whose gross sales value reaches the registration threshold in any financial year or part of it, must register with the tax authority within 30 days from the date of exceeding the threshold:

- Registration threshold: > EGP 500.000 (EUR 26.556)

A natural or legal person who has not reached the registration threshold may voluntarily apply for VAT registration.

Please note that the threshold stated above is not exhaustive for all circumstances requiring local VAT registration.

- Egyptian VAT number format: 123/456/789

4.2. Process to switch to e-Invoicing

Even though many countries encourage or even mandate e-Invoicing, there may be specific requirements on the Trading parties – typically the Supplier – before starting an e-Invoicing program. This section provides a brief overview of such requirements.

Item	Commentary
Actions towards authorities, required in order to enable electronic processing instead of conventional processing	• Before a supplier can start clearing documents via the E-invoicing platform, they must acquire a Client ID and Client Secret code from the ETA. These values must be used to receive a token, which makes it possible to communicate with the e-invoicing platform. for 1 hour accept the invitation and complete the user profile information⁴ (see section 10.1 below)

³ For the purpose of this document, IT refers to Indirect Tax, including, but not limited to Value-Added Tax (VAT), Goods and Sales Tax (GST), Sales tax, etc.

⁴ <http://20.50.48.69/api/01-login-as-taxpayer-system/>

	- The suppliers must also acquire and install the e-seal hardware, produced by an accredited manufacturer, see further under section 7 - More details on the registration with ETA can be found under section 10.1
Actions between the trading partners, e.g. customer acceptance, agreement, etc.	There are no formal requirements for the buyer and sellers to have a formal agreement documenting the method and format of the invoice exchanged between them, however a strong recommendation would be to have one in place
Transition period from the moment of starting e-invoicing during which, e.g. parallel invoicing may be allowed	N.a

4.3. Outsourcing invoice issuance function

Many companies decide to outsource the issuance process of e-invoicing to third parties who have the necessary infrastructure and knowledge of implementing and executing e-Invoicing. This may be driven by a technical limitation or local regulatory requirements. However, before doing so, it is highly recommended that a supplier investigates whether such outsourcing is permissible and whether any requirements must be fulfilled.

Item	Commentary
Whether outsourcing of invoice issuance (creation) is allowed or not	Yes, technical outsourcing is a common practice in Egypt, however, service provider accreditation is required and limited to those entities in Egypt (See Section 10.4).
Whether statement of outsourced issuance is required on the invoice	Not explicitly regulated
Whether outsourcing agreement is required between the taxpayer and the third-party is performing actions on its behalf	Not explicitly regulated
Content and formality requirements to the Outsourcing agreement between the taxpayer and the third-party	N.a
Whether any notifications to or derogations from authorities are required in the specific jurisdiction for outsourced issuance	As stated above, service providers for invoice issuance must be accredited in the jurisdiction
Whether, and which, requirements exist to the outsourced party to be able to act on behalf of the taxpayer	N.a

4.4. Outsourcing invoice receipt function

Due to the unique nature of the AP process, it may be required for the buyer (invoice receiver) to have an explicit agreement, or other permissions to be put in place for Service Providers to conduct invoice receiving functions on behalf of them.

There is no formal requirement for the buyer or their service provider to interact directly with the e-invoicing platform for invoice reception or validation. Such an option is, however, available. This exchange can be done in currently any format.

Egypt's requirements on the outsourcing of the function of receiving invoices is accreditation for the service provider (see [Section 10.4](#)). Besides this, there are no requirements for direct reception from the supplier nor the connectivity with the e-invoicing platform.

5. Document processing

5.1. Format and other technical requirements

Globally, a multitude of e-Invoicing formats and infrastructures exist. Local regulators often offer or mandate the use of certain formats, standards, or platforms for the transmission or delivery of invoices or other tax-related documents. Pagero has the technical depth and experience to support country-specific technical requirements globally.

Item	Commentary
Mandated document format(s) for exchange with mandated Gov platform(s) and/or between the trading parties	JSON or XML, up to taxpayer's discretion, according to the latest specifications published on the SDK
Other document format(s) commonly used for exchange between trading parties	Unregulated, i.e. the invoice can even be printed and distributed as paper, as long as it fulfills the content requirements
Mandated platform(s) required to have connection with for e-document processing	ETA e-invoicing platform
Other platform(s) relevant for e-document processing	N.a.
Schematron(s), XSD schema or other official mechanisms ensuring document content	See validation rules (link)
Routing ID's / codes or other identifiers used in the jurisdiction for counter-party identification and document exchange	N.a.
Other technical aspects	- Egyptian e-invoices need to contain the special product classification in line with Global Product Classification (GPC), which follows Global Standards 1 (GS1) definitions. - List of Tax type codes - List of Unit type codes

5.2. Communication with ETA

Regulations in Egypt foresee the following options on how e-documents can be communicated with the mandatory infrastructure(s):

Communication options	Commentary
Automated	• API (XML/JSON) http://20.50.48.69/api/
Manual	• Web Portal (Keying in invoice data)
Other options	• Currently none

5.3. Issuance and clearance process

This section describes the document issuance and clearance process from the supplier perspective.

5.3.1. Domestic documents

This section describes the process for documents created to be transmitted within the given country

Mandated use of ETA e-invoicing platform:

Automated from ERP (via API)

1. **The supplier** creates the invoice⁵ according to the content specifications required by the ETA, where such invoice
 - a. Must be create in the format specified by the ETA (JSON or XML), and
 - b. Must be signed with an [electronic signature](#) which is done by a special [HSM](#) device or USB token accredited by ITIDA.
 - c. Must be sent to ETA for validation in real time (within 1 day of its issuance) as of Jan 2023⁶.
2. **The supplier** then has to submit such e-invoice for clearance with the e-invoicing system via:
 - a. Direct an API connection from the taxpayer's ERP system to the platform
 - b. An intermediary
 - i. If e-invoice is submitted via an intermediary, the supplier is required to provide such invoice in the final JSON or XML format, with their own eSignature. An additional eSignature of the intermediary must be applied when submitting invoices via intermediaries.

Manually (via web portal)

⁵ The system allows unified coding of goods and services this code must be register prior to using them

⁶ ETA announced that sending e-Invoices to ETA system in the 7-days rule will be reduced gradually. Source:

<https://www.eta.gov.eg/ar/news/tkhfyd-mhlt-al7-ayam-almmnwht-lmmwlyn-larsal-alfwatyr-alalktrwnyt-ly-almnzwmt-tdryjyana-aly>

1. The supplier can also use a web browser to log into the [Invoicing Portal](#) and manually key in the invoice data⁷. There is a [user information guide](#) that clearly expressed the setup to conduct this.

The system will, upon receipt of an e-invoice (both via API and manually), perform a set of validations:

- a. If the validation is successful, the invoice will be assigned a UUID (get cleared) and returned to the supplier,
 - b. If the validation is not successful, the supplier will receive a rejection and the invoice does not obtain legal validity.
3. **The supplier**, upon successful clearance by the e-invoicing system, will be allowed to distribute the invoice to the buyer, either via PDF or other means

When going through the process steps defined results of the steps should look as shown in these examples:

1. After preparing the source document for submission it should look as shown in these examples for [JSON](#) and [XML](#).
2. After creating canonical versions of each document, they should look as shown in these examples for [JSON](#) and [XML](#).
3. After applying hashing of the serialized document 32-byte hash value should be received for the document.
4. After signing the hash value using eSeal certificate and creating CADES-BES signature it should have structure similar to this [parsed structure](#). Note that parsed structure shows the contents of the CADES-BES, but actual structure is binary ASN.1 encoded block of data.
5. After including signature data into original document content you should get files similar to these examples for [JSON](#) and [XML](#).

The e-invoicing platform can optionally, if configured by the trading parties, send real-time notifications to both parties (the supplier and the buyer) or any actions are taking place with their invoices in the platform. The platform can as well be used to save, review or print the invoice data.

If the suppliers are not in the scope of the e-invoicing mandate:

The trading parties can generate invoices and can exchange invoices as they wish as long as the invoice content is consistent with the Egyptian laws. Note, VAT cannot be claimed on non-electronic invoices from 2022.

⁷ The Egyptian Tax Authority published a video on its YouTube channel clarifying how to register the taxpayer on the electronic invoice system. Steps are given in the Appendix

5.3.2. Cross-Border

This section describes the requirements for cross-border outbound documents such as sales invoices

There are no explicit requirements for cross-border invoicing with regards to the ETA's e-invoicing regime. However, importers and exporters (non-residents and domestic) must register the invoice data and other shipment data electronically to the Egyptian Customs Authority 48 hours before the shipment's arrival via the Advance Cargo Information (ACI) system. Find more information [here](#).

5.4. Reception and validation process

This section describes the document reception, validation and acceptance processes from the buyer perspective.

Is it not mandatory for the buyer to interact directly with the ETA platform for invoice reception or validation. It is, however, possible for the buyer to reject an invoice via the platform. See [section 5.6.](#) below

5.4.1. Domestic documents

This section describes the process for documents received for purchases or transactions within the given country

There is no explicitly regulated process for receiving invoices, rather a process is to be determined directly between the trading parties.

Reception can be done directly via the platform.

Manually or via API

- If the receiver is a registered user of the platform, they will be notified, by email by the system, that an invoice has been received and is available in their account.
- Through API, and together with the document UUID, the buyer can retrieve invoices with statuses Valid, Rejected or Cancelled. However, invoices with the status Submitted or Invalid will not be visible for the buyer.

Buyers receiving invoices from the platform, both manually or through API, can only receive the XML or JSON of the invoice cleared by the platform.

In order to fetch the invoice from the platform, the buyer is required to have the individual invoice's UUID. There is no way for the buyer to obtain the UUID from SDK. It is not clear how the buyer should receive the UUID in any other way than by receiving the actual invoice from the supplier. For this reason, fetching invoices by the buyer from the SDK platform turns into a theoretical exercise, then an actual feature that the buyer can use to somehow benefit thereof. If the buyers have an account in ETA, they can use several search mechanisms [to see](#) the received invoices. Whether the buyers are obliged to have an account in ETA portal or not is not clearly communicated by ETA.

5.4.2. Cross-Border

This section describes the requirements for cross-border inbound documents such as purchase invoices

Goods imported from outside of Egypt are not included in the e-invoice system because the source of the invoice is from outside of Egypt. However, there are some obligations to register in the ACI system. See section [5.3.2](#) above.

5.5. AoR (response) process

The AoR process via the ETA platform is not mandatory in Egypt. Such option is, however, envisaged in the technical specifications, now even, on voluntary basis. As mentioned above, it as well requires that the buyer has the UUID associated for the specific invoice and has identified such invoice in the platform.

Buyer Rejection via the platform is possible only within a limited period after issuance of the document. The rejection time limit is 72 hours. However, this period is a configurable value, that is controlled by ETA according to the document type as per the governing regulations.

If the allocated rejection time has passed, but the invoice is incorrect, the buyer needs to notify the issuer of the error outside of the ETA platform and that they need to revert a previously issued incorrect invoice through the submission of a credit note.

5.6. ETA validations

Some tax regimes require businesses to send tax documents to a predetermined hub either before, shortly after issuing invoices. Generally, a hub that requires this will send a reply to the issuer. This reply can be expressed as a clearance/ approval response, rejection, semi approved, etc.

Upon a clearance request from the supplier, ETA system will perform i.a. the following validations:

1. Structure Validator
2. Core Fields Validator
3. Signature Validator
4. National ID Validator
5. Taxpayer Validator
6. Reference document validator
7. Code Validator

Simple fields ValidatorAfter successful validation, UUID will be assigned to a cleared invoice, and it will become a fiscally valid document.

An invoice can have the following statuses with ETA:

- **Submitted** – meaning that ETA has not yet finally processed the invoice submitted for clearance by the supplier,
- **Valid** – meaning that ETA has approved/cleared the invoice submitted for clearance by the buyer,
- **Rejected** – meaning that the buyer has rejected the invoice,
- **Invalid** – meaning that the e-invoicing system has not approved the invoice.
- **Canceled** – meaning that the supplier has canceled previously successfully cleared invoice.

The issuer of the documents can retrieve documents in any status, while the receiver can only retrieve those with statuses **Valid, Rejected, and Canceled**.

Invoice presentation with QR code is available for suppliers and buyers (if they have UUID) in ETA platform. The use of this feature is voluntary.

5.7. Invoice presentation / copy

Some regimes require a visual presentation of the invoice file to be transmitted along with the structured invoice file. This section describes if there is any regulation concerning visual or image-based presentations of invoices as a copy for the original or vice versa.

As mentioned above, there is no requirement for e-invoices to be exchanged in the same format directly between the taxpayers, nor are there any regulations around presentations or copies of invoices, as long as the UUID is present on the document. Therefore, there is no explicit wording required on an invoice presentation to distinguish it from the original cleared invoice.

5.8. Distribution between taxpayers

This section explains how and if trading parties can send invoices between each other. In some cases, hubs also distribute the tax document to the buyer.

Egypt has no explicit requirements for the exchange of invoices. This means that the trading parties may agree on how and in what form they want to exchange the invoices. To illustrate with a few examples:

- The trading parties can agree whether they will exchange invoices directly between each other or whether they will leverage the ETA platform for the exchange,⁸
- If they exchange directly with each other, they can agree on whether they should exchange the mandatory XML or JSON, or whether they want to exchange the invoice in another format e.g., PDF, or even if they want to exchange paper invoices.

⁸ Whether the suppliers are allowed to send invoices to the buyer outside of ETA system is not clearly communicated by ETA, therefore, our interpretation is that suppliers can send the invoice (after it has been approved by ETA) to the buyer outside of the ETA.

The primary requirement that must be fulfilled is that the invoice must include the minimum mandatory VAT content requirements and the UUID assigned by ETA.

5.9. Rectification process

This section will express the process that needs to be taken when there is an error in an invoice, how it is to be handled, and corrected by both buyer, seller, and if a notification needs to be delivered to the tax authority.

In Egypt, credit / debit notes are the document type used to reduce / increase the amounts on the previously issued invoices that have been registered in e-Invoicing solution.

When creating credit notes submitters need to consider these restrictions:

- the structure of the receiver and issuer should not be changed
- the taxpayer activity code reference should not be changed
- referenced invoices (if multiple) all should be issued by the submitter taxpayer
- referenced invoices (if multiple) all should be issued for the same recipient
- referenced invoices should be issued before issuance date of the credit note
- the invoice lines in the credit note should be the same as in the combination of all invoices referenced - only quantities and amounts can be changed
- total amount of the credit note should be less than the total amount of referenced invoices.

5.10. Coexistence of paper and electronic invoices

Item	Commentary
Whether parallel invoicing (issuance and exchange of the same document in several formats, e.g. electronically and on paper) is allowed and/or whether there are any regulations surrounding it	No explicit requirements, however, is strongly recommended to be avoided
Whether the jurisdiction allows for document (e.g. invoice) dematerialization, i.e. destruction of the original paper invoice, for processing and/or archiving	In principle, not allowed
Whether any conditions apply, and which, to the dematerialisation	Invoices should be stored in the format that they were received in Issuers that have had their invoices cleared; status "Valid" are required to store them electronically.
Whether the jurisdiction allows for document (e.g. invoice) materialization, i.e. destruction of the original electronic document, for processing and/or archiving	Yes

Whether any conditions apply, and which, to the materialisation	No explicit requirements, but storage of cleared invoices must be conducted in the format that they were created in.
--	--

5.11. Contingency invoicing

This refers to the process for e-invoicing if any mandatory infrastructure is inaccessible. If temporary measures are available or allowed, to facilitate invoicing during the downtime.

In the event of any malfunction in the ETA’s system, companies can then raise the invoices for the downtime resulting from the failure in the form of batch submissions, according to the period specified by law.

6. Document content requirements

6.1. Document types

Item	Commentary
Documents mandatory for issuance by supplier	• Complete invoice (mandatory) • Credit / debit note (mandatory) • Invoice cancellation (optional)
Documents mandatory for issuance by buyer	• Invoice response: accept or reject (optional)

Item	Commentary
Self-billing allowed	• Not allowed
Simplified invoice allowed	• Not allowed

6.2. Document numbering

This section outlines the requirements to the sequential numbering of invoices and, where applicable, other documents.

6.2.1. Document numbering by the taxpayer

Item	Commentary
A sequential number, based on one or more series, which uniquely identifies the invoice	• Yes
Different series of sequential numbers allowed (e.g. a separate sequential numbering for intercompany billings, credit notes, etc.)	• Yes
Allowed to start a new sequential numbering every year	• No information currently available

Worldwide numbering on legal entity level allowed provided that gaps can be explained	No information currently available
Required that the numbers follow the date of issuance (i.e. is it true that an invoice with number 2 cannot have an invoice date older than the invoice with number 1)	Yes, the numbering of the invoices must be chronological at issuance.

6.2.2. Additional document numbering

This section should outline any additional numbering, e.g. provided in addition by the tax authority or that must be generated by the taxpayer based on specific specifications.

UUID, see section mandatory invoice content.

6.3. Indirect tax (IT)¹⁰ rates

This section illustrates the applied IT¹¹ rates and provides a non-exhaustive list with examples of goods and/or services that fall within specific IT rates. IT rates that differ between different administrative units are clearly outlined.

Indirect tax rates		
14%	Standard	All other taxable goods and services.
5%	Reduced	Capital equipment used by taxable businesses; basic foodstuffs; agricultural supplies; construction of new properties; consulting services; and oil products ¹²
0%	Zero-rate	Exports and related services
	Exempt	Financial services; medical supplies; healthcare; public broadcasting; education; domestic energy; basic foodstuffs; and the sale and leasing of real estate

6.4. Mandatory IT invoice content

The section below illustrates the minimum legal requirements related to the content of invoices issued according primarily to the indirect tax regulations of Egypt. Please note that other additional content requirements might apply in addition, i.a. of technical character.

General	
Required to mention the word "invoice"	Yes

¹⁰ For the purpose of this document, IT refers to Indirect Tax, including, but not limited to Value-Added Tax (VAT), Goods and Sales Tax (GST), Sales tax, etc.

¹¹ Local name ضريبة القيمة المضافة

¹² Rates provided as illustrative example

Required that the invoice is issued in the language of the country who is entitled to impose the invoice requirements:	English or Arabic
Sequential numbering	Yes
Required to mention copy or duplicate in case a copy is issued	No
Reference in case of outsourced issuance	No

Supplier data	
Full legal name of the supplier	Yes
Allowed to abbreviate or shorten the legal name of the supplier	No information is currently available
Full address of the supplier in country of establishment	Yes
Allowed to mention the PO box address instead of the legal address of the supplier	No
IT identification number/sales tax number from the supplier in the country where the supply takes place for IT purposes	Yes
IT identification number of the supplier in the country of establishment	No
Information (i.e. name, address, IT number) of the fiscal representative of the supplier (if appointed)	Yes
Legal form of the supplier	No
Trade register number of the supplier	No
Company Registry data of the supplier (e.g. court registration, address of chamber of commerce)	No
Place of legal seat of the supplier (Headquarters)	No
Other supplier data	No

Customer data	
Full legal name of the customer	Yes
Allowed to abbreviate or shorten the legal name of the customer	No information is currently available
Address of the customer in country of establishment	No
Bill-to address when it is different from the registered address of the customer	No

Allowed to address the invoice to a Post Office Box address instead of the legal address of the customer	• No
IT identification number in the country where the supply takes place for IT purposes in case of domestic supplies (if available)	• Yes
IT identification number of the customer in the country of dispatch for invoices issued for exempt export supplies	• No
IT identification number of the customer in another Member than the Member State of dispatch for intra-Community supplies	• N.a
Information (i.e. name, address, IT identification number) of the fiscal representative (if customer has appointed a fiscal representative)	• No
Other customer data	• No

Transaction data	
Date of issue	• Yes
Date of supply (chargeable event)	• Only if it differs from the invoice date
Date of prepayment	• No
Description of the goods/services	• Yes
Quantity of the goods supplied or the extent of the services supplied	• Yes
Purchase order number	• No
Shipped from location (for the supply of goods)	• No
Shipped to location (for the supply of goods)	• No
Status of the goods (e.g. in bond, in free circulation)	• No
Incoterms	• No, but recommended
Other information on the supplied goods/services required (except in case of intra-Community supply of new means of transport)	• N.a

Financial data	
Taxable base per item (unit price excl. IT)	• Yes
Total taxable base per IT rate or exemption	• Yes
IT rate applied	• Yes

Total IT amount calculated per rate	• Yes
Total IT amount payable	• Yes
Discounts/rebates if not included in the unit price	• Yes
Total gross amount (including IT)	• Yes
Mandatory to mention the total IT amount due in the national currency	• Invoices indicating foreign currency are not allowed for supplies made between local entities. However, foreign currency invoices are permitted for supplies with the non-resident entities. • Exchange rate of the Egyptian bank on the day of invoicing used to convert currency sold to the value of currency EGP • Foreign currency codes are to follow ISO 4217
Which other amounts (i.e. none, only the total IT amount) must be mentioned in the national currency of your country	• None
Exchange rate (if the invoice is not issued in the local currency)	• Yes
Which exchange rate must be applied in order of priority	• Exchange rate of the Egyptian bank on the day of invoicing used to convert currency sold to the value of currency EGP
Terms of payment	• No, but recommended
IBAN and BIC number of supplier	• No, but recommended

Specific references for invoices	
Invoice reference in case of IT exemption or reverse charge	• Yes
List the required references in case of exemption or reverse charge	• No information is currently available
Allowed to refer to the appropriate provision in Directive 2006/112/EC for: - "reverse charge" for supplies subject to a reverse charge mechanism; - "supply is taxable in the country of the recipient" for B2B supplies of services; - "exempt intra-Community supply - article 138 VAT Directive"; - "Exempt export - article 146 VAT Directive"; - "simplification for triangular sales - article 141 VAT Directive - "Transfer of own goods- article 17 VAT Directive"?	• N.a

Required to specifically mention 'margin scheme - travel agencies', 'margin scheme - second hands goods', if applicable	• Yes
Reference required if the transaction takes place outside the EU as a result of the Use and enjoyment provisions	• N.a
Specific other reference required, e.g. in case of barter transaction, prepayments, etc. (not self-billing or special margin schemes)	• No
Specific references required in case invoicing is outsourced	• N.a
Reference to 'cash accounting scheme' in B2B sales in case the IT is due by the supplier upon receipt of the payment/IT is deductible by the customer upon payment	• No
Other specific requirements/references to be mentioned on an invoice	• No

6.5. Simplified invoice

The Supplier is not always obliged to issue a complete invoice. In certain scenarios, they may be able to issue a so-called simplified invoice.

Simplified invoicing	
Possible to issue simplified invoices for certain supplies	• No
Maximum amount for simplified invoices	• N.a
Other supplies for which a simplified invoice can be issued	• N.a
Simplified invoices limited to certain type of supplies	• N.a
Simplified invoices not allowed for certain transactions	• N.a
Minimum content requirements on a simplified invoice	• N.a
Invoices subject to the national invoice requirements (not self-bills)	• N.a
(other) Invoices subject to the national invoice requirements (not self-bills)	• No

Pagero Online does not support the creation of simplified invoices as they typically do not correspond to the business requirements of Buyers.

6.6. Rectification document

In Egypt, debit/ credit notes must be issued as rectification documents. A credit/ debit note should include at least the following information:

Specific references for rectification documents	
Must the word "credit note" be mentioned	• Yes
Reference to original invoice required on a credit note	• Yes
Clear indication required that the amount mentioned on the credit note is crediting earlier amount (e.g. minus sign '-')	• No • From the credit note must result that credit is invoiced, e.g. the reference 'credit note' must be mentioned on the document
Reason for credit required	• No, but recommended

Sequential numbering	
Separate sequential credit note numbering require	• No
Allowed to issue one credit note to correct different invoices	• Yes • Reference to the respective invoices (invoice number)

When creating credit notes submitters need to consider these restrictions:

- the structure of the receiver and issuer should not be changed
- the taxpayer activity code reference should not be changed
- referenced invoices (if multiple) all should be issued by the submitter taxpayer
- referenced invoices (if multiple) all should be issued for the same recipient
- referenced invoices should be issued before the issuance date of the credit note
- the invoice lines in the credit note should be the same as in the combination of all invoices referenced - only quantities and amounts can be changed
- total amount of the credit note should be less than the total amount of referenced invoices

6.7. Optional content

This section outlines briefly whether and how the trading parties can provide additional content in the technical e-document format mandated or otherwise prescribed in the specific jurisdiction.

The provision of any additional content in the mandatory XML is limited please refer to the format [specifications](#).

7. Integrity and Authenticity

Ensuring the integrity of the content, as well as the authenticity of the origin (I&A) of an invoice, is an obligation for both the Supplier and the Recipient.

The purpose of this section is to further clarify the local I&A requirements on B2B invoices, as well as outline whether different requirements apply to B2G invoices. The review is done both from the Supplier’s and the Recipient’s perspective, as varying rules may apply.

Item	Supplier	Recipient
Whether it is mandatory to ensure I&A in the jurisdiction	• Yes	• Yes
Which methods for ensuing I&A are provisioned for	E-signature or e-seal	• No explicit requirements
Which requirements apply for I&A methods if ensured by a third-party (outsourcing)	• The third party must add their e-signature when they issue the invoice on behalf of the taxpayers using their digital certificate and signature creation tools.	• No explicit requirements

7.1. e-Signature

Even where e-signature is not an explicit requirement, Pagero recommends that our customers apply it as, globally, it is the most widely accepted legal means of ensuring I&A for business transactions.

In practical terms, this results in the same evidential position for eDocuments as for paper documents. This unique feature of e-signature provides an exceptional level of legal certainty.

Item	Commentary
------	------------

e-Signature technical requirements	• The taxpayer must generate an advanced electronic seal/signature, from an approved hardware device, “eSeal X.509 certificate”¹³ • The signature has to follow CADES-BES ¹⁴structure • The taxpayer has to obtain digital certificate either for the legal entity (e-seal) or a natural person representing the legal entity (e-signature) • More information is available under section 10.2
Automated e-signing	• No explicit requirements
Time-stamping of e-signature	• Yes

7.2. e-Signature validation

The Recipient of an invoice is often required by law or practice to validate the e-signature on the received invoice. Even for countries where the validation-upon-receipt is not expressly regulated, this is recommended by Pagero for both trading partners to be able to guarantee I&A.

Item	Commentary
Validation upon receipt	• No explicit requirements
Time-stamping of validation data	• No explicit requirements

¹³ An X.509 certificate binds an identity to a public key using a digital signature. It contains an identity (a hostname, or an organization, or an individual) and a public key and is either signed by a certificate authority or is self-signed. When a certificate is signed by a trusted certificate authority, or validated by other means, someone holding that certificate can use the public key it contains to establish secure communications with another party, or validate documents digitally signed by the corresponding private key.

¹⁴ An electronic signature technically implemented based on CadES standard has the status of an advanced electronic signature. This means that it is uniquely linked to the signatory; it is capable of identifying the signatory; only the signatory has control of the data used for the signature creation; it can be identified if data attached to the signature has been changed after signing.

8. Document retention

This section describes archiving requirements regarding the invoicing process and documents handled by Pagero. Please note, additional archiving requirements may apply to your specific documents.

Item	Commentary
Components to be stored (e.g. tax invoice, source documents, audit trail, I&A proof)	• Original invoice with signature including certificate or other evidence of integrity and authenticity as appropriate
Requirements to present stored documents in a specific audit format	• No requirements for capabilities to transform to audit format
Legibility, i.e. the ability to read stored e-documents by an untrained eye	• Required
Legibility requirements	• If the original invoice is in a machine-readable format, the taxable person must offer means to provide human-readability
Retention period for invoices not related to immovable property¹⁵	• 5 years
Start point of retention period calculation for invoices not related to immovable property	• From the date of filing the tax return
Retention period for e- invoices related to immovable property	• Not explicitly regulated
Start point of retention period calculation for invoices related to immovable property	• Not explicitly regulated
Retention period for other than regular invoices or invoices related to immovable property (if existing):	• Not explicitly regulated
Start point of retention period calculation for other than regular invoices or invoices related to immovable property:	• Not explicitly regulated

¹⁵ Pagero stores all documents for 90 days due to data privacy and security regulations, after which the data is automatically deleted, unless Archive has been selected. Pagero provides long term archiving (for the legally required term, plus one year)

Outsourced archiving	• Allowed
Archiving abroad¹⁶ and conditions, if any (e.g. notification, derogation, online access, mutual tax assistance treaty)	• Not explicitly regulated
Other requirements in relation to electronic document retention	• No

¹⁶ In certain situations or jurisdictions deviating requirements – typically regarding archiving abroad – may apply to invoices and related documents, e.g. concerning matters of defence and national security. Therefore, Pagero encourages customers to inquire for and receive an explicit written statement from the local tax authority stating that the archiving of such documents outside of the taxpayer's country is permitted. Pagero in a capacity of a third-party may not apply for derogations or clarifications of this nature on behalf of a taxpayer.

9. Other transactional documents

Along with invoices, countries may have regulations relating to other trading documents. The purpose of this section is to provide a selective (not exhaustive) overview of the regulation of other transaction-related documents of importance.

Document	Commentary
Purchase order	• No explicit requirements
Rectification document	• Yes, see section 6.7 above
Payment instruction	• No explicit requirements
SAF-T (or alike) reporting	• No
Transportation documents	• Yes, see section 10.5.
Other	• No

10. Other requirements

This section highlights certain aspects of the local regulations and infrastructure that differ from Pagero's General invoice processing and our standard country compliance investigation.

10.1. ETA registration process

10.1.1. Account creation

To complete the profile of a non-registered delegate:

- a) Open the invitation notification received via e-mail and follow the instructions to accept the invitation.
- b) Once you accept the invitation, you will be transferred to the Registration portal to complete your profile.
- c) You'll be requested to provide your mandatory information (National ID, mobile number, password, confirm password).
- d) Make sure you filled all mandatory fields then click on Accept the Terms and Conditions and the Privacy Policy.
- e) The profile and representations are now created.
- f) You will be redirected to the Registration portal to Log in.

To accept an invitation for a registered delegate:

- a) Open the invitation notification received via e-mail and follow the instructions to accept the invitation.
- b) Once you accept the invitation, you will be transferred to the Registration portal to confirm your National ID so that the system can verify your profile.
- c) By completing this step, the profile is updated, and the additional representations are created.

- d) You will be redirected to the Registration portal to choose from a list of representations to Log in.¹⁷

10.1.2. Account update

To Manage the taxpayers that they represent and update their contact details and branch address.

- a) Go to the Registration portal. Log in as a taxpayer delegate by using a valid username and password.
- b) On the left-side menu, select Manage Profile, and then select Taxpayer Profile.¹⁸

10.1.3. ERP registration

Register an ERP system to represent the taxpayer in the future

- a) Go to the Registration portal. Log in as a taxpayer delegate by using a valid username and password.
- b) On the left-side menu, select Manage Profile, and then select Taxpayer Profile.
- c) Scroll down the page, and then go to Representatives
- d) the upper-right corner, select + Register ERP
- e) A pop-up window will appear. Fill in the required boxes, and then select Register.
- f) Copy the Client ID, Client Secret 1, Client Secret 2, mark the check box, and then select Done.
- g) By registering an ERP on the system, the profile and the representation are created.¹⁹

10.2. Process of enabling e-Signature / e-Seal

In Egypt there are strict requirements for signing invoices as is expressed as mandatory above.

A Taxpayer can request an e-Seal Certificate through one of the below steps:

Key pair (public and private key that will be used in digital signing and verification process) will be generated from the taxpayers' side through [HSM device](#) and sent to the CSP (currently Egypt Trust / MCDR) to sign it and issue a digital certificate for the taxpayer. Then the taxpayers will receive the certificate from CSP on a portable media import it back into the HSM device.

1. The key pair is generated from the CSP's side on a secure media i.e. token which is given back to the taxpayer to be directly used in the sealing documents.
2. The large and medium-size companies can deploy Network HSM or PCI HSM²⁰

¹⁷

¹⁸ <https://invoicing.eta.gov.eg/content?path=userguide/update%2Dtaxpayer%2Dprofile%2Dcontactinfo%2Dbranchaddress#>

¹⁹ <https://invoicing.eta.gov.eg/content?path=userguide/register%2Derp%2Dsystem#>

²⁰ <https://www.incometax.gov.eg/invoice/doc/esign/Cryptographic%20Hardware%20Devices%20new.pdf>

- All methods of signing e-invoices in Egypt requires taxpayers to use a hardware component. i.e. Cryptographic Hardware Devices

There are three options available for companies based on the number of their transactions.

- For small size companies that will use ETA portal. ITIDA introduces what so called [a Web-Sign Client component](#) where a Hardware Token will be used, it is like a USB device where the taxpayers can inset in their devices, install a specific application and follow the installation instructions.
- For medium and large companies, ITIDA introduces two options:

10.3. Key timelines for the e-invoicing mandate roll-out:

Date	Regulation	Event	Other comments
01 Mar 2020	no 188	obliging the registrants to issue an E-invoice of the provided goods and services. This is per the terms and conditions set by the Head of Tax Authority.	
15 Nov 2020	no 386	obliging 134 companies registered at the Large Taxpayers Center Department to apply the E-invoice system	(First wave)
15 Feb 2021	no 518	obliging 350 companies registered at the Large Taxpayers Center Department to apply the E-invoice system	(second wave)
15 May 2021	no 85	obliging the rest of the companies registered at the Large Taxpayers Center Department to apply the E-invoice system and an optional use of the system for the companies not included in this decree if it met the required conditions.	(third wave)

15 Sep 2021	no 195	obliging the companies registered at Medium Taxpayers Center in Cairo and the Large Taxpayers Center of the Free Profession to apply the E-invoice system	(fourth wave)
10 Oct 2021	no. 38, 222, 328 , and 367	obliging the exporters including non-resident to apply the E-invoice system and issue an E-invoice of the exported goods.	More info can be found here .
1 Oct 2021	no 1602	obligating the Governmental Bodies/entities to apply the E-invoice system and at the same time not dealing with the suppliers not using the E-invoice system,	
15 Dec 2021	no 443	obliging 3737 companies registered at the Joint Stock Companies Department and the Investment Department to apply the E-invoice system starting	
2023	N.a	Expectation from the ministry of finance that all issued e-invoices including b2c will follow the e-invoicing mandatory system.	More information can be found here

10.4. Service Provider Accreditation

In Egypt, Service Providers need to get licensed (Licence Validity for three years and it can be renewed from ETA side), otherwise they cannot operate as an e-invoicing service provider in Egypt. This would be considered illegal, that is operating without such license.

As per Article (37) of the executive regulations of the unified procedures law : The service provider must have licenses to implement service provider electronic e-invoicing system in accordance with the provisions of the last paragraph of Article (35) of the law, and the following must be met:

A. terms and conditions for licencing:

- The license applicant must be an on-premises Egyptian joint stock company (owned by Egyptians purely).
- Payment of the fee for granting the license in respect of which a decision is issued by the Minister of Finance.
- Compliance with the pre-determined technological operating conditions issued from ETA.
- The company's legal representative must not have been previously convicted of a tax evasion crime.
- Managing the digital seals issued to them, according to which they are authorized to carry out the duties to control and protect them.

B.Licensing procedures:

- Submitting an application to the Authority to obtain a license to work as a service provider.
- Provide a service level agreement (SLA) According to technical requirements and international standards.
- Submitting a financial guarantee to be determined by a decision of the Minister.
- Submitting a report to the Egyptian Tax Authority on the financial position of the company for the previous fiscal year of submitting the licensing application.
- Submitting a request to register with the Egyptian tax Authority as a service provider or adding this activity to his tax card if he is already registered with the egyptian tax authority.

A decision shall be issued approving the license by the Minister of Finance based on a proposal from the head of the Egyptian Tax Authority, and the data of companies accredited as service providers are published on the ETA electronic portal.

As per Article No.38 The licensed service provider must comply with the following:

Ensure that invoices received from taxpayers are sent to the Egyptian Tax Authority within The period to be determined by a decision of the head of the tax authority from the time of sending it.

- Submitting a notification to the tax authority to update their data in the event of a change in it.
- Obtaining the approval of the tax authority regarding the technological changes that have been made/carried out after obtaining the license.
- Submit a monthly report on his work, including, for example, the number of invoices received of the taxpayers and the number of invoices sent to the egyptian tax authority for the same period.
- Submit a semi-annual review of the level of service performance.
- Obligation to ensure confidentiality and not to disclose any data or information that comes to his knowledge as a service provider, and submit a written NDA for this.

Pertinent to the requirements for operating as a service provider in Egypt, Pagero **does not provide a solution in the country. The requirements including, but not limited to, having a non-cloud based on-premises solution, direct integration with the ETA (not via an intermediary), and more as seen above do not coincide with us being able to operate a compliant solution in the jurisdiction.*

10.5. Penalties and fines:

As per the VAT law, article 66, any violations of the procedures, terms, or systems of VAT law and its executive regulations can lead to penalties of **a minimum of EGP²¹ 500 and up to EGP 5000** (excluding tax evasion violations which is subject to other measurements).

E-invoicing non-compliance results:

A fine of a **minimum 20 000 EGP and not exceeding 100 000 EGP** shall be imposed on anyone who violates the provisions of articles relevant to the electronic invoice issuance of the [Unified Tax Procedures Law](#); namely (24, 28, 35 / first and second paragraphs, 37 / first and fourth paragraphs, 38 / first, second and third paragraphs).

Furthermore, paper invoices will not be accepted when submitting tax returns, as well as when deducting or refunding value-added tax, as only electronic invoices are to be accepted starting from April 2023.

10.6. The Advance Cargo Information system (ACI)

In light of the latest Decrees issued by the Ministry of Finance, i.e., Decrees No. [38](#), [222](#), [328](#), and [367](#) of 2021, the Advance Cargo Information (ACI) concept was built. It is a system that requires submitting the shipment data electronically to the Egyptian Customs Authority 48 hours before the shipment's arrival. The required documents include, among others, commercial invoice, certificate of origin, packing list, bill of lading, pro forma invoice, and a letter of credit.

Benefits of the new system

The new system will aim at protecting the country from the infiltration of goods of an unknown origin or source. It will also help ease the customs activities, elevate international trade, and unify customs release and clearance processes. In addition, the new customs mechanisms will facilitate access to refunds for exporting businesses and foster streamlined and digitally-enabled import and export procedures.

Who is in scope?

Following taxpayer categories will be obliged to comply with the requirements in Phase 2:

- Importers
- Exporters and suppliers (foreign)
- Clearance companies
- Sea/air shipping companies

21 1Egyptian Pound equals CA 0,042 Euro

How does the (ACI) system work?

Two portals have been implemented for different kinds of suppliers. Egyptian importers have to register and follow the steps specified by the online portal [Nafeza](#).

Foreign exporters have to use the platform [CargoX](#).

Timelines

The roll-out of the (ACI) system is taking place in two phases:

- Phase 1 – pilot phase since 1 April 2021;
- Phase 2 – the mandatory phase kicking off on 1 October 2021.

Foreign exporters are advised to work closely with their Egyptian customers to ensure compliance of the consignments' data with the newly imposed requirements. Penalties for customs violations and smuggling are also foreseen in the rules.

10.7. Electronic Receipt System

The Egyptian Minister of Finance has [confirmed](#) that a pilot implementation of the [electronic receipt system](#) was launched on 15 April 2022, with the mandatory phase starting on 1 July 2022.

The e-receipt system will be based on a central system, enabling the Tax Authority to monitor all commercial activity within the sales of goods and services to end consumers. The monitoring will be done through an integration with the point-of-sale devices or ERP systems of the traders, which will facilitate validity verification of B2C transactions in real-time.

Similar to the phased rollout approach of implementing the e-invoicing obligation, larger businesses will be the first to participate in the system. Some of them are already assisting in piloting the system. The last phase of the project is expected during the fiscal year 2023/2024 and will include smaller businesses, such as those operated by craftsmen or entities providing trade-based services.

The implementation of the electronic receipt system is part of Egypt's plan to automate its tax management system. The modernization and automation of the system began with the e-invoicing introduction in 2020.

11. Country-specific processing

This section outlines how the Pagero General eInvoicing process has been adapted to the local requirements to ensure compliant local processing.

11.1. Document issuance (AR) with Pagero

Not supported.

11.2. Document reception (AP) with Pagero

Not supported.

12. Closing statements

12.1. Confidentiality

This General invoice processing description of Pagero Online, our Country Compliance Reports, and other documents provided by Pagero are of confidential nature and are only intended for and may only be used by Pagero's Customers, their employees or other authorized recipients for the purpose or purposes specified and agreed to between the parties. Descriptions, reports, and documentation may not – neither in full nor in parts – be copied or otherwise distributed to third parties without Pagero's prior written consent.

12.2. Disclaimer

In order to establish a relationship based on trust and transparency with our Customers, Pagero provides its General e-Invoice and eArchiving processing descriptions of Pagero Online as well as Pagero's Country Compliance Reports. These documents are intended to enable our Customers and their tax advisors to assess how Pagero has interpreted the relevant legislation and implemented it in our processes in order to support our Customers to fulfil their legal obligations.

We would like to remind our Customers that, according to tax and accounting regulations, the outsourcing of any process to third parties (such as issuance, compiling, processing, receipt, or archiving of e-Invoices), will not lead to a shift of liability, the liability will remain with the Customer. Accordingly, the taxable person always remains responsible towards the local authorities for ensuring their e-Invoice compliance, and for fulfilling accounting and reporting requirements. We want to emphasise this, in the light of that there can be potentially conflicting regulations on regional, national, or international levels.

Pagero endeavours to only include and provide accurate and up to date information. However, Pagero makes no guarantees as to the accuracy of any statement, information or advice provided by Pagero, whether in writing or verbally. The Customer must make an informed decision about whether to adhere to and follow such recommendations or not. The final decision and responsibility regarding tax, accounting, and reporting issues rest with the Customer.

Revision history

Date	What has changed
17 May 2021	Document created
2 Nov 2021	Amendments to resources in the whole document
19 Jan 2022	Updated invoice content tables
25 Oct 2022	Document general periodic amendments
7 November 2022	New sections added: • 10.5 Penalties and fines • 10.6 the Advance Cargo Information system (ACI) • 10.7 electronic receipt system
28 April 2023	New section amended: 10.5 Service Provider Accreditation
